Art Unit: 2626

## **DETAILED ACTION**

Page 2

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1 to 13 and 21 to 26, drawn to a system for deploying filters for processing signals, comprising means for calculating a filter for each of a plurality of frequency bands, means for grouping filters, means for determining a representative filter, and means for using the representative filters, wherein the filters are temporal noise shaping (TNS) filters, classified in class 704, subclass 227.
  - II. Claims 14 to 17, drawn to a method for conveying filter information for a spectrum of a signal to a receiver, comprising transmitting information regarding a first filter, transmitting information regarding a second filter, and transmitting a mask to indicate switching between the first filter and the second filter across the spectrum, classified in class 704, subclass 219.
  - III. Claims 18 to 20, drawn to a method of conveying filter information for a signal to a receiver, comprising transmitting information regarding a first filter, transmitting information about a second filter, and transmitting a negative integer when a filter is identical to the first filter, classified in class 714, subclass 6.

Application/Control Number: 10/811,662

Art Unit: 2626

The inventions are distinct, each from the other because of the following reasons:

Page 3

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as for reducing effects of quantization noise by temporal noise shaping. See MPEP § 806.05(d).

- 3. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has separate utility such as for transmitting linear prediction coefficients representing a linear prediction filter between and encoder and a decoder. See MPEP § 806.05(d).
- 4. Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination III has separate utility such as for an error correction method for eliminating redundant data by transmitting a code only when data changes. See MPEP § 806.05(d).

Art Unit: 2626

- 5. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
- 6. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 7. Applicants are advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should Applicants traverse on the ground that the inventions or species are not patentably distinct, Applicants should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the

inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Martin Lerner whose telephone number is (571) 272-7608. The examiner can normally be reached on 8:30 AM to 6:00 PM Monday to Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David R. Hudspeth can be reached on (571) 272-7843. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Application/Control Number: 10/811,662

Art Unit: 2626

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a
